Tropper Technologies

3G/4G Tool Suite

Tropper Technologies products offer unique web-enabled capabilities to the wireless industry.

The **Gallium** product complements the Tropper Technologies System Sentinel data collection/real time viewer tools by providing a **statistical analysis engine and a map-based presentation capability**.

Gallium processes Argon collected log files. The files can be stored on any computer accessible from the web.

Key metrics, such as Data Rate and Latency may be quickly identified and quantified.

Anywhere,
Anytime,
From Your Browser

The Gallium product is a server-side, Web 2.0 cloud-based browser application that runs in Internet Explorer.

Gallium's Web 2.0 framework delivers a highly cost-effective solution (by minimizing installation costs and IT maintenance expenses).

network.

Gallium delivers a high performance, cost-effective solution for:

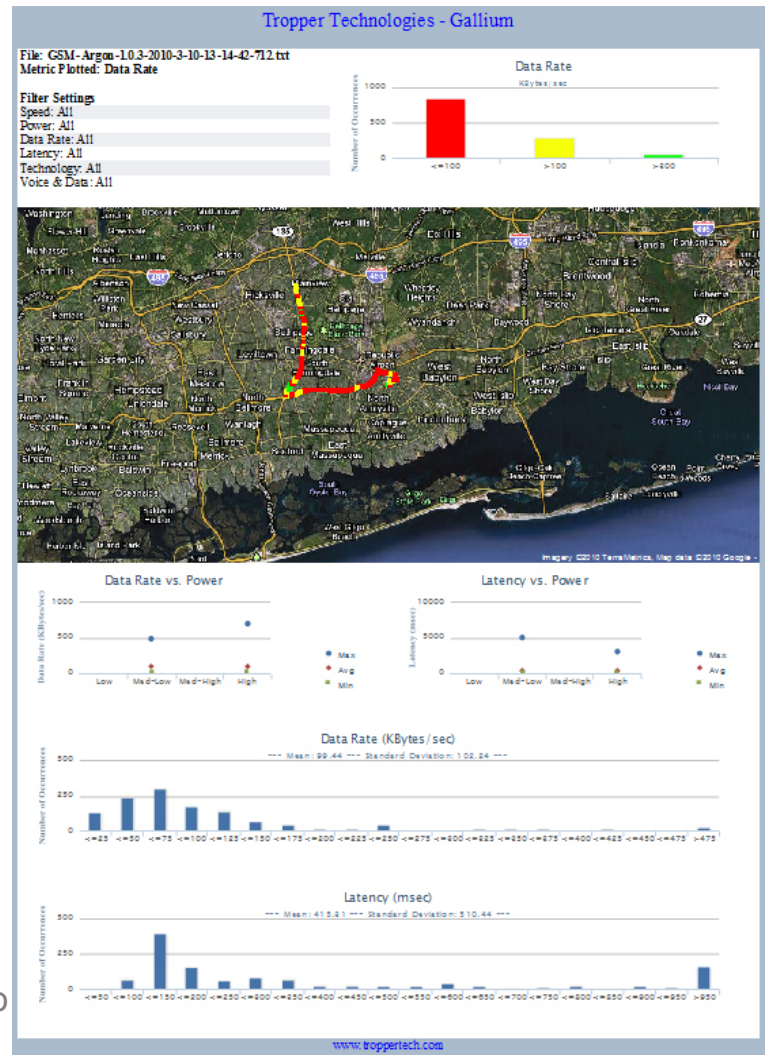

- + Network Providers
- + Terminal Manufacturers
- + Infrastructure Manufacturers

Metrics include:

- + Lat/Lon
- + Data Rate (geospatial)
- + Latency (geospatial)
- + Data Rate (statistical)
- + Latency (statistical)

In one example use case, employing advanced filtering capabilities Gallium can be used to immediately compare the performance, at the cell edge, of one technology to another.
